

Your Favorite Reef Needs Your Help!

Our coral reefs are facing unprecedented challenges.
Photos from your dive can make a difference in their fate.

Efforts are Underway to Protect Florida's Coral from a Disease Outbreak and You Can Help:

1. Find corals marked with a tag like the one pictured above. These corals have been treated to help stop the spread of the coral disease.
2. Take photos of the tag, the whole colony, and any white spots/lines (especially near any nails you find in the skeleton).
3. Upload these photos to www.SEAfan.net/tags
4. Enjoy your dives, knowing you helped the reefs we all love and depend on!
